

```
import java.util.Scanner;
class Main
{
    public static void main(String[] args)
    {
        Scanner input=new Scanner(System.in);
        int num=input.nextInt();
        int i,r,sum=0;
        int temp=num;
        while(num!=0)
        {
            r=num%10;
            sum=sum*10+r;
            num=num/10;
        }
        num=temp;
        if(temp==sum)
        {
            System.out.println("Palindrome");
        }
        else
        {
            System.out.println("Not a palindrome");
        }
    }
}
```
