```java
import java.util.Scanner;
class Main
{
    public static void main(String[] args)
    {
        Scanner input=new Scanner(System.in);
        int num=input.nextInt();
        int reverse=0,r;
        for(int i=0;i<=num;i++)
        {
            r=num%10;
            reverse=reverse*10+r;
            num=num/10;
        }
        System.out.println(reverse);
    }
}
```
